Forward Looking Statements

This Presentation contains certain information that may constitute "forward-looking information" under applicable Canadian securities legislation about Canada Nickel Company Inc. ("**CNC**"). Forward-looking information includes statements about strategic plans, including future operations, future work programs, capital expenditures, discovery and production of minerals, price of nickel, timing of geological reports and corporate and technical objectives. Forward-looking information is necessarily based upon a number of assumptions that, while considered reasonable, are subject to known and unknown risks, uncertainties, and other factors which may cause the actual results and future events to differ materially from those expressed or implied by such forward-looking information, including the risks inherent to the mining industry, adverse economic and market developments. There can be no assurance that such information will prove to be accurate, as actual results and future events could differ materially from those anticipated in such information. Accordingly, readers should not place undue reliance on forward-looking information. All forward-looking information contained in this Presentation is given as of the date hereof and is based upon the opinions and estimates of management and information available to management as at the date hereof. CNC disclaims any intention or obligation to update or revise any forward-looking information, whether as a result of new information, future events or otherwise, except as required by law.

This Presentation has been completed by CNC. Certain corporate projects referred to herein are subject to agreements with third parties who have not prepared, reviewed or approved this Presentation. The Presentation is not intended to reflect the actual plans or exploration and development programs contemplated for such projects.

Any forward-looking statement speaks only as of the date on which it is made and, except as may be required by applicable securities laws, CNC disclaims any intent or obligation to update any forward-looking statement, whether as a result of new information, future events or results or otherwise. Although CNC believes that the assumptions inherent in the forward-looking statements are reasonable, forward-looking statements are not guarantees of future performance and accordingly undue reliance should not be put on such statements due to the inherent uncertainty therein.

The scientific and technical information contained in this Presentation has been reviewed by Steve Balch, P. Geo, (VP Exploration) and a Qualified Person within the meaning of National Instrument 43-101.

Foreign Exchange Assumptions

All amounts discussed herein are denominated in CAD dollars unless otherwise specified.

Why Invest in Canada Nickel?

CANADA NICKEL COMPANY

Canada Nickel (CNC) owns 100% of the Crawford Nickel-Cobalt Sulphide project:
A new nickel discovery with large scale potential in an established mining camp adjacent to existing infrastructure north of Timmins, Ontario, Canada.

- One of the top 10 nickel sulphide resources globally, with significant expansion potential
- Initial metallurgical testing confirmed excellent nickel recovery of 46%, 51% and 52% from the first 3 locked cycle tests using conventional flowsheet design. Latest testing show 15% less grinding energy required
- Nickel mineralization in Crawford extended to Main, East, West and North Zones, with total strike length of ~7 km. New target from MacDiarmid option property 15% larger than original Crawford Main Zone
- Groundbreaking, mutually beneficial MOUs signed with local First Nations
- Canada Nickel has launched wholly-owned NetZero Metals Inc. to develop zero-carbon production of Nickel, Cobalt and Iron - has applied for trademarks NetZero Nickel™, NetZero Cobalt™, NetZero Iron™

Canada Nickel is completing a PEA on the Crawford Project by May 2021, FS by year-end 2021

- MOU signed with Glencore to examine potential to use Kidd Creek mill and met site to allow faster, significantly lower capital cost startup.

Canada Nickel is well timed – nickel appears to be entering a supercycle which occur every 15-20 years.

- Prices should remain at relatively high levels for an extended period to incent new supply to meet already strong demand growth further accelerated by substantial requirements from electric vehicles

Nickel has limited investible opportunities

- Prior supercycle in 2005-2007 largely emptied project pipeline outside Indonesia.

* Mineral Resource Estimate prepared by Caracle Creek International Consulting Inc.

Board and Management Team

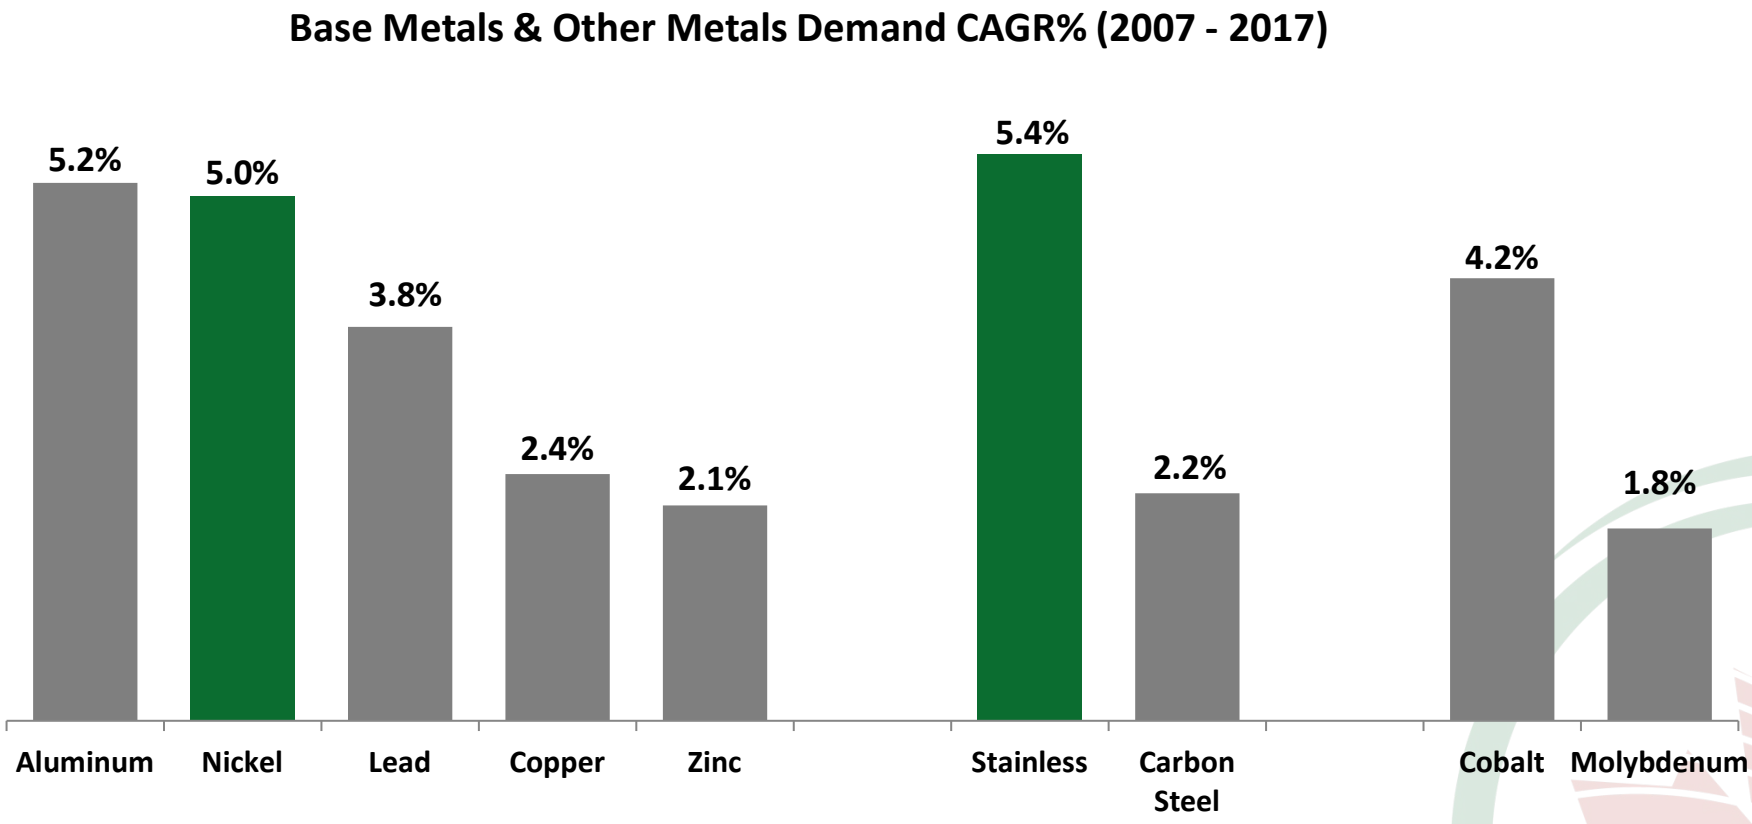

CANADA NICKEL COMPANY

David Smith ***Director*** P.Eng., C.Dir.	• Senior VP, Finance and CFO of Agnico Eagle Mines Limited; • Chartered Director, Director of Sprott Resource Holdings
Francisca Quinn ***Director*** M.Sc.	• Co-founder and President of Quinn & Partners Inc., a recognized advisory firm advancing sustainability in business and capital markets; • Previously with Carbon Trust and WSP Global
Jennifer Morais ***Director*** BA, MBA, CFA	• >20 years as senior executive in private equity, alternative finance, mining finance and management consulting; previously with TPG Capital, CPPIB, OMERS, Hatch and CIBC
Kulvir Singh Gill ***Director*** B.Comm., ICD.D	• 20 years of experience in innovation and sustainability in mining; lead innovation and growth projects for Fortune 500 clients across the mining, O & G and heavy industrial sectors
Mike Cox ***Director*** B.Sc., MBA	• Managing Partner at CoDa Associates; previously head of Vale UK and Asian refineries following over 30 years in senior leadership roles in Base Metals with Inco and Vale
Russell Starr ***Director*** MA, MBA	• Previously in senior roles with RBC Capital Markets, Scotia Capital, Orion Securities, and Blackmont; SVP and Director of Cayden Resources (acquired by Agnico for $205M)
John Leddy ***Senior Advisor, Legal*** LL.B.	• Senior Advisor, Legal and Strategic Matters at Karora Resources Inc. (formerly RNC Minerals); Over 20 years' experience as a business lawyer and former Partner at Osler

Mark Selby ***Chairman, CEO*** B.Comm.	• Previous CEO of Royal Nickel Corporation • Corporate development, strategy, business planning and market research Executive with Quadra Mining and Inco • Nickel market expert
Wendy Kaufman ***CFO*** CPA, CA	• >25 years of experience leading mining companies in project finance, capital structure, capital markets, accounting and internal controls, tax, financial reporting and public disclosure; completed $4 billion finance for Cobre Panama
Steve Balch ***VP, Exploration*** P.Geo.	• Geophysicist with 35 years experience specializing in Ni-Cu-PGE deposits including for Inco Limited in the Sudbury Basin and Voiseys Bay • Active in developing geophysics technology used in exploration globally
Jessie Liu-Ernsting ***VP, Corp Dev & IR*** P.Eng., MBA	• Close to 20 years of experience in mining capital projects engineering, capital markets, private equity and corporate strategy • Previously with Hudbay Minerals, Resource Capital Funds, CIBC, Hatch and Golder Associates
Pierre-Philippe Dupont ***VP, Sustainability*** M.Sc.	• >15 years of experience in successfully obtaining environmental, community stakeholder and First Nation approvals for mining projects, including permitting Dumont Nickel and Canadian Malartic; former Director of Sustainability at Glencore
Christian Brousseau ***Project Director*** ing.	• 30 years of experience with engineering, design and construction in mining, including >6 years as project Director for the Dumont Nickel Project, three years as the Engineering and Construction Manager for Detour Gold

Nickel Demand: A Leader Among Metals

Nickel demand a leader among metals over the last decade (5%) driven by continued strong growth in stainless steel (5.4%) with little contribution from electric vehicles to date.

Source: Macquarie

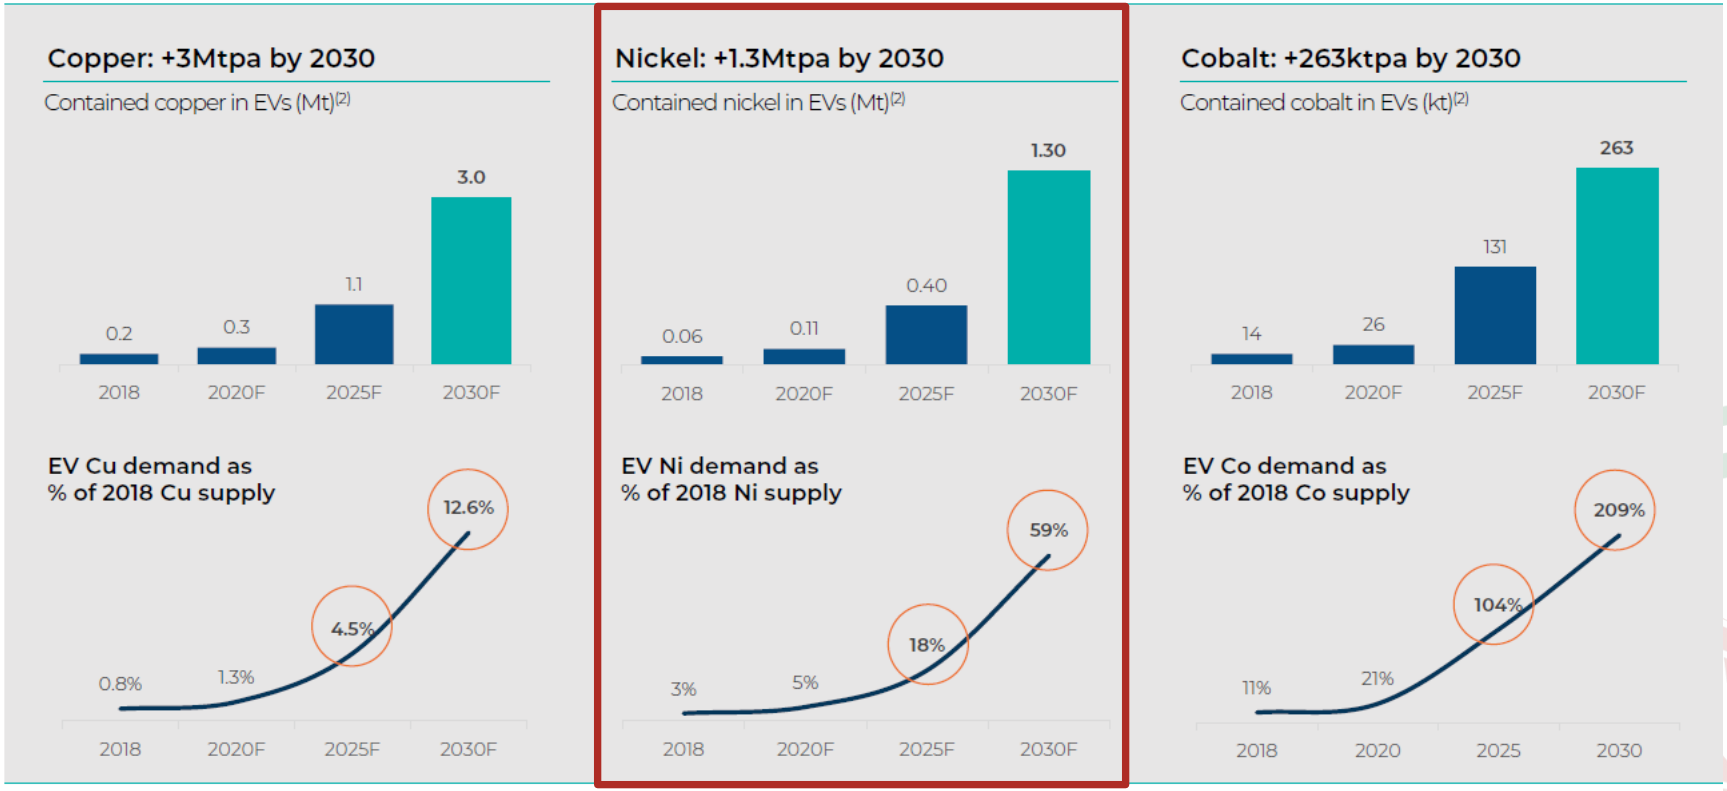

Electric Vehicles to Drive Significant Demand Growth – 9.2 Mtpa by 2050

CANADA NICKEL COMPANY

Glencore presentations highlight massive growth expected in nickel demand; *Tesla 3TW of annual batteries needs 1+ Mtpa alone!*

Electrification of transport relies on the large scale replacement of ICE with EVs

The mobility transition is a major new source of material demand: >140M EVs forecast on the road by 2030[1]

Bank of America Merrill Lynch
2019 Global Metals, Mining & Steel Conference

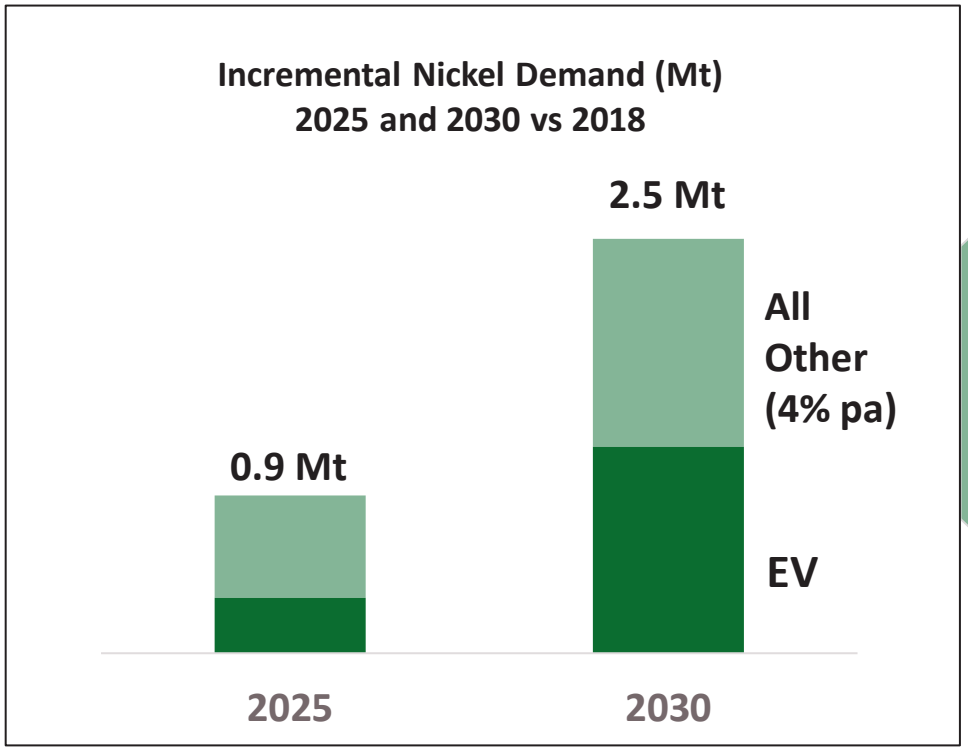

Source: (1) BNEF Long-Term Electric Vehicle Outlook 2018. (2) Glencore estimates, Wood Mackenzie, CRU, BNEF. Does not include the copper, nickel or cobalt required for other parts of the EV supply chain including charging infrastructure, energy storage systems, grid

GLENCORE

Nickel Demand:
EVs Going to Multiply Demand Requirements

CANADA NICKEL COMPANY

By 2025, EV + trend demand 4% growth (slower than 5% trend) requires nearly 1 Mtpa of new supply. By 2030, *2.5 million tonnes (or double today's)* is required. *Outside of Indonesia, very little visibility on new supply.*

Where is new project supply going to come from?

- Laterites – HPAL?
- Laterites – FeNi?
- NPI?
- Sulphides?

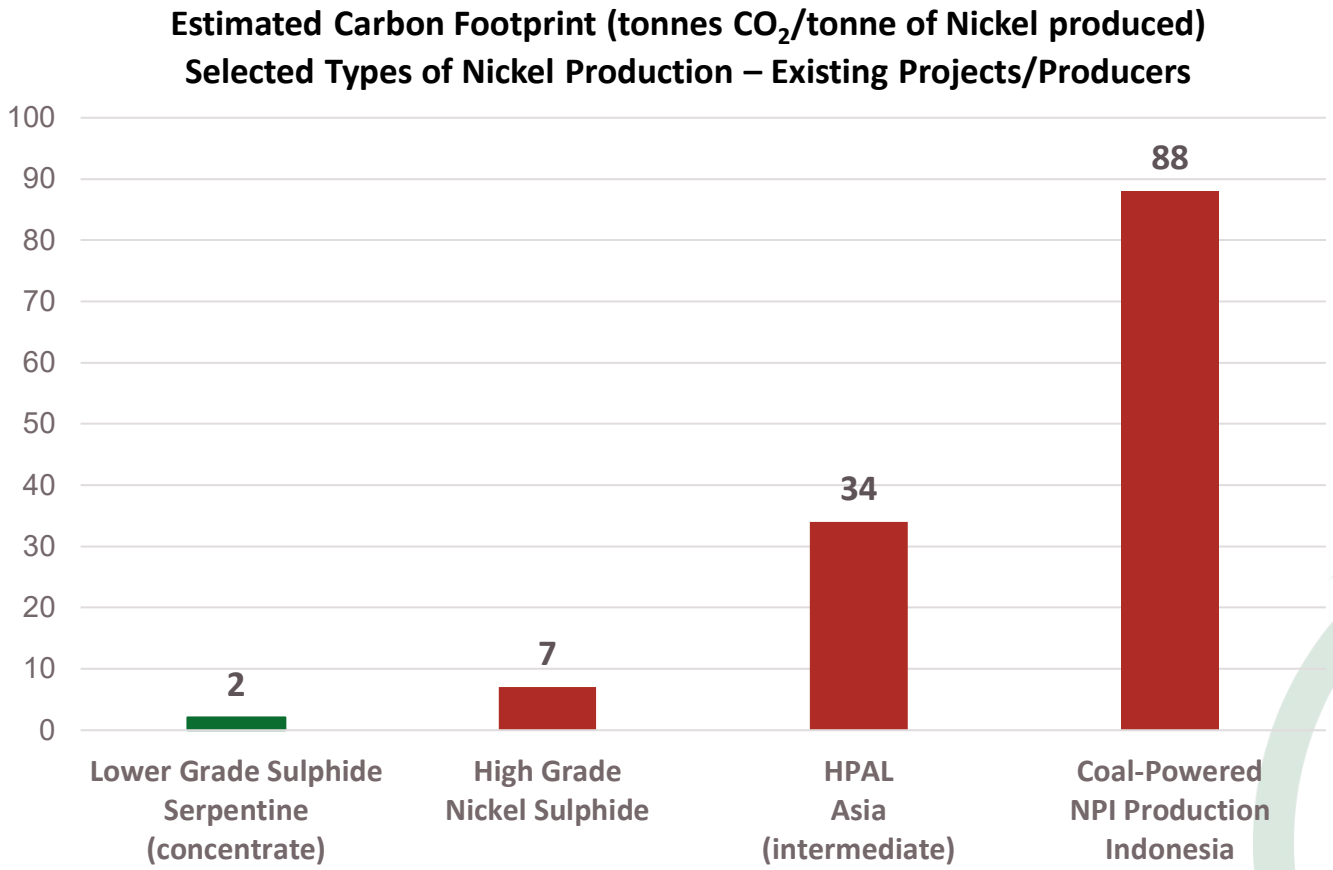

Using copper as comparison,
adding 100% of current nickel supply is equivalent to adding 20 Escondidas

Source: CRU, CNC Analysis

Tesla: “Please mine more nickel…”

CANADA NICKEL COMPANY

“…please mine more nickel... Tesla will give you a giant contract for a long period of time if you mine nickel efficiently and in an environmentally sensitive way.” – *Elon Musk, Co-Founder and CEO, Tesla Earnings Call July 22, 2020*

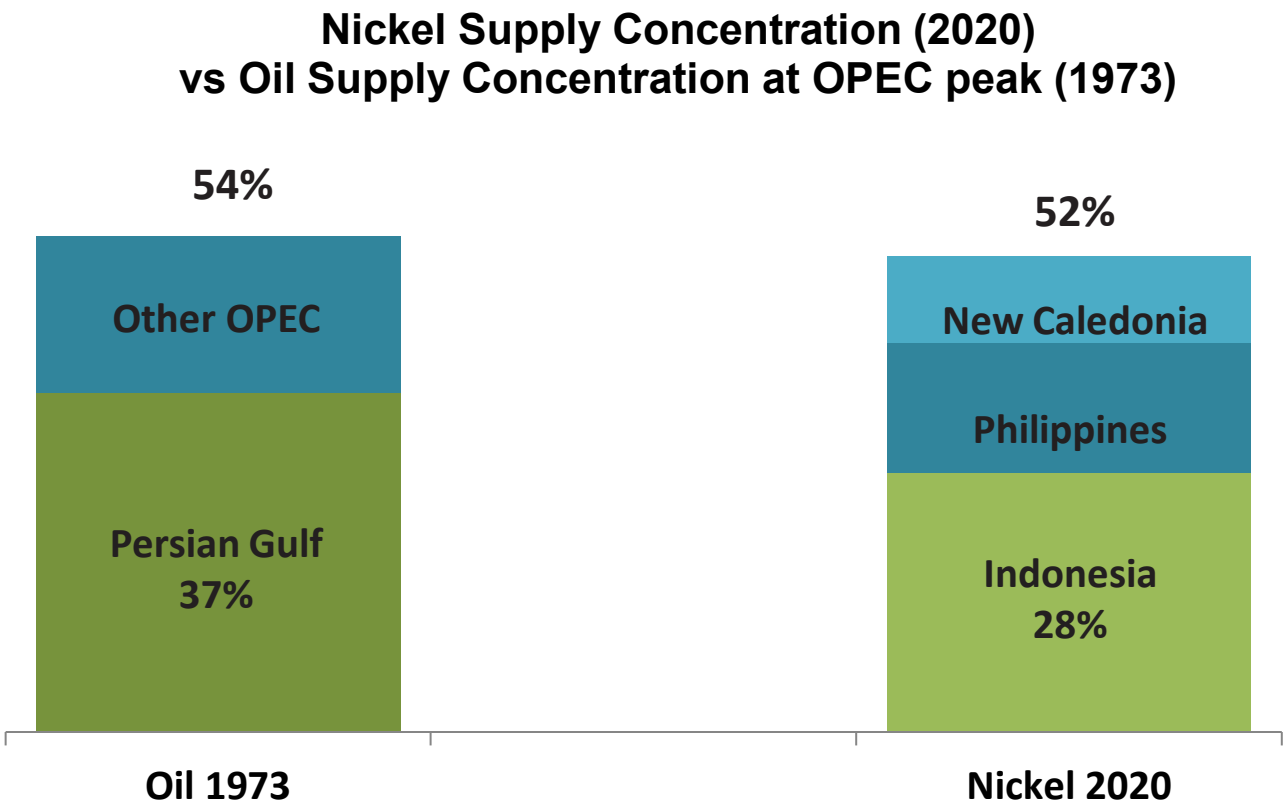

Source:
WoodMac Nickel Industry Costs, Canada Nickel analysis

Nickel Supply – Significant Political Risk
Is there an ONEC in our future ??

CANADA NICKEL COMPANY

Nickel supply facing increasing political risk as Indonesia now dominates nickel supply growth. Just 3 countries are expected to control as much of the nickel supply as OPEC did of global oil supply at its peak in 1973

Source: U.S. EIA, Canada Nickel analysis

These 3 countries:

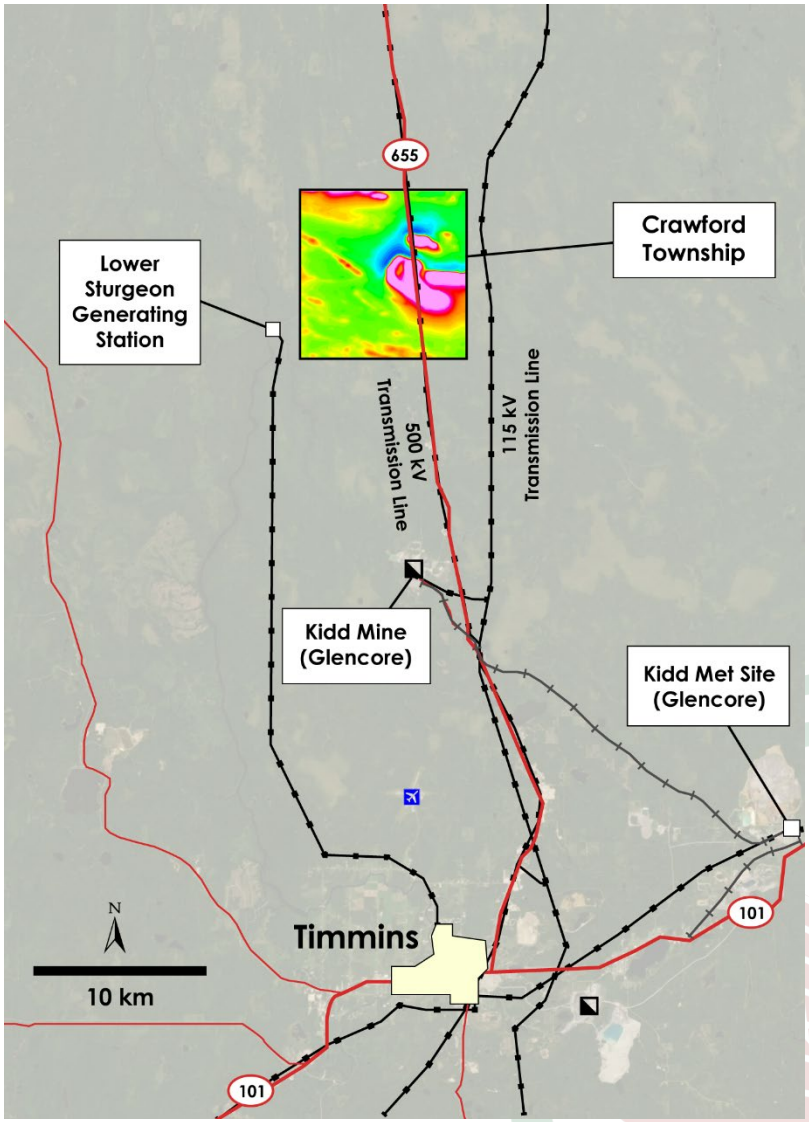

- Face revenue shortfalls
- Have intervened directly into mining sector

Crawford Nickel-Cobalt Sulphide Project

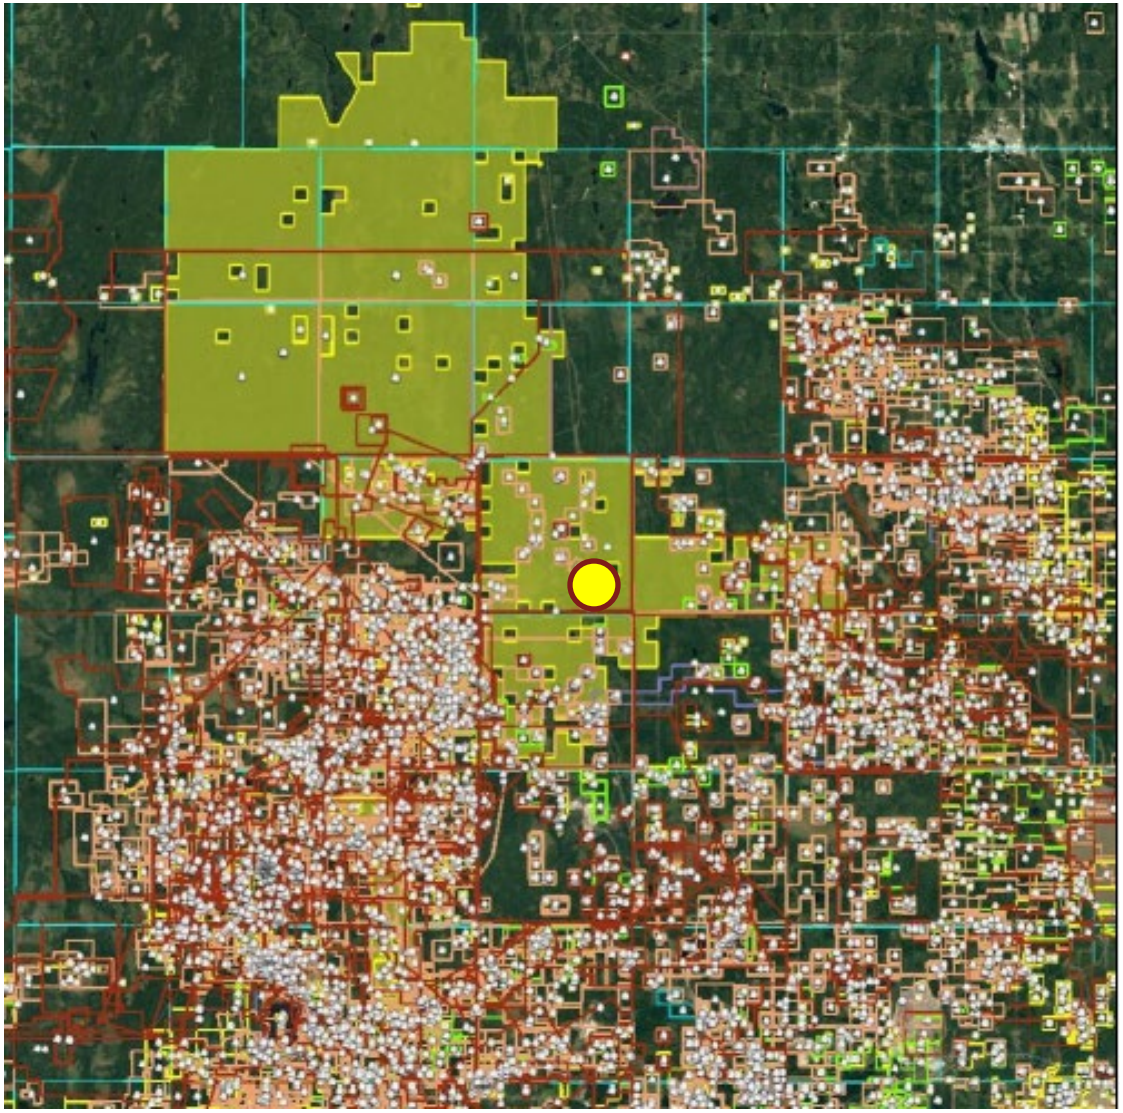

CANADA NICKEL COMPANY

One of largest nickel-cobalt sulphide resources located in a well established mining camp with infrastructure.

- World-class jurisdiction in Ontario, Canada
- Established Timmins mining camp with 100-year history of mining
- Access to all major infrastructure including zero-carbon hydroelectricity
- Active permitting and development of mines
- Long history of downstream processing

Part of Relatively Underexplored Property

Why Crawford undiscovered until now?

- A few drill holes by Inco in 1960s in each large anomaly
- Minimal exploration in 1970/1980s
- Land owned by forestry company for several decades until acquired by Noble in 2011
- Little outcrop on land package

Crawford Mineral Resource

CANADA NICKEL COMPANY

Crawford's resource ranks as one of the 10 largest nickel sulphide resources globally

- Higher grade core of M&I Resource of 280 Mt at 0.31% Ni, 0.013% Co, and 0.04 g/t Pd + Pt within an overall M&I resource of 653 Mt at 0.26% Ni and 0.013% Co
- Higher grade inferred resource of approximately 110 Mt at 0.29% Ni and 0.013% Co within an overall inferred resource of approximately 497 Mt at 0.24% nickel and 0.013% cobalt

- Mineral Resource Estimate prepared by Caracle Creek International Consulting Inc., in accordance with the National Instrument 43-101 ("NI 43-101") and CIM Definition Standards on Mineral Resources and Reserves, with an effective date of December 11, 2020.
- Reference is made to the full CNC technical report dated January 17, 2021, available on www.sedar.com.
- Mineral resources that are not mineral reserves do not have demonstrated economic viability.

Higher Grade Core – Crawford Main Zone Clearly Defined in Resource

CANADA NICKEL COMPANY

A higher grade core of 201 Mt of 0.34% Ni including 58 Mt at 0.36% was defined within resource. Remains open to the west.

The higher grade core has been defined for:

- 1.8 km long
- 150-220 m wide
- Up to 650 m deep
- Infill hole CR20-42 averaged 0.42% Ni

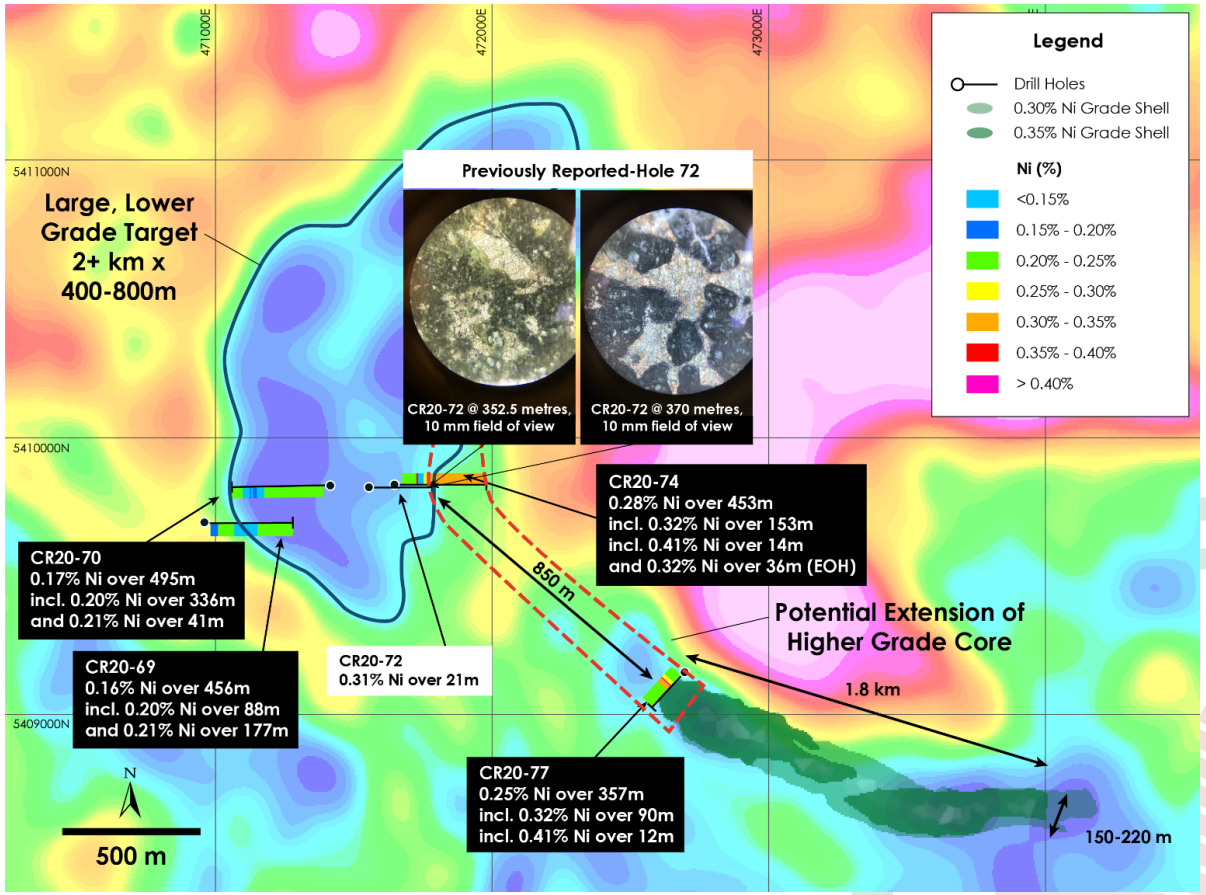

Refer to Canada Nickel Company's press release dated October 21, 2020 for more information.

West Zone – Third New Discovery
Hole 74 Extends Higher Grade Core

CANADA NICKEL COMPANY

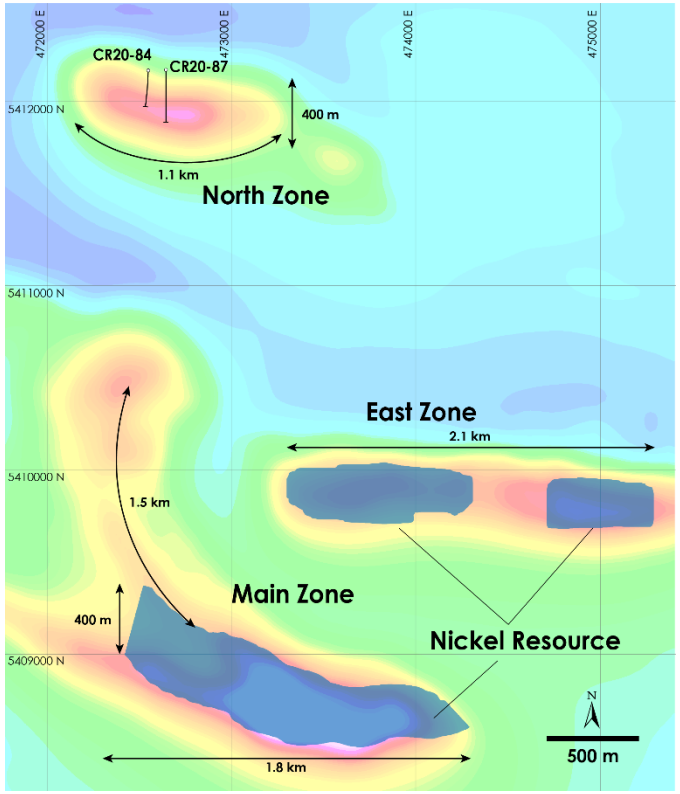

- Follow up drilling of hole CR20-74 in West Zone substantially extends higher grade mineralization potential by 45% or 850 metres to northwest.
  - 0.30% nickel over core length of 308 metres, including 153 metres of 0.32% nickel and ending with an additional 36 metres at 0.32% nickel
- Two holes, CR20-69 and CR-70, defined wide, low grade mineralization across width of 1km within multi-kilometre anomaly and remains open in multiple directions

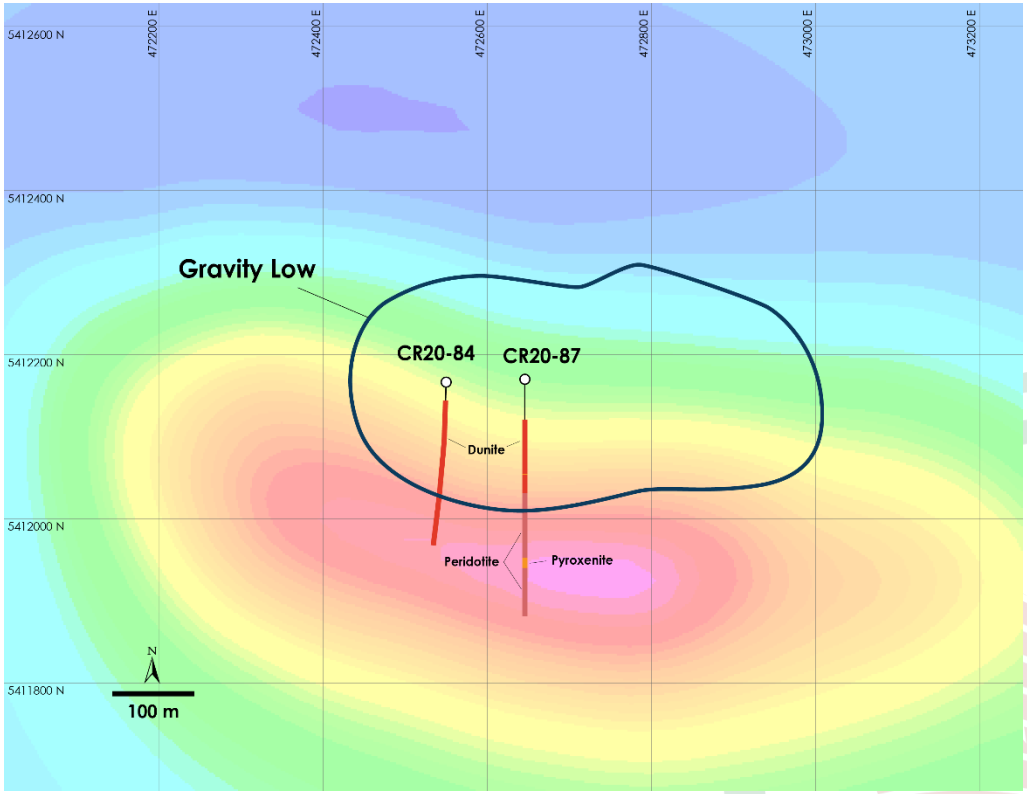

Main-Higher Grade Zone and West Zone Holes 69, 70, 72, 74 over top of gravity gradient

Fourth New Discovery Reinforces Geophysical Understanding

- Initial two drill holes collared 100 m apart intersected mineralized dunite in 1.1 km by 400 m wide geophysical anomaly approximately 2.5 km north of Main Zone.
- Hole CR20-84 remained in mineralized dunite across its entire core length of 501 metres.
- Hole CR20-87 collared in and intersected mineralized dunite for 218 m, before intersecting multiple peridotite/pyroxenite sequences similar to ones seen in recently discovered PGM zones at Crawford.

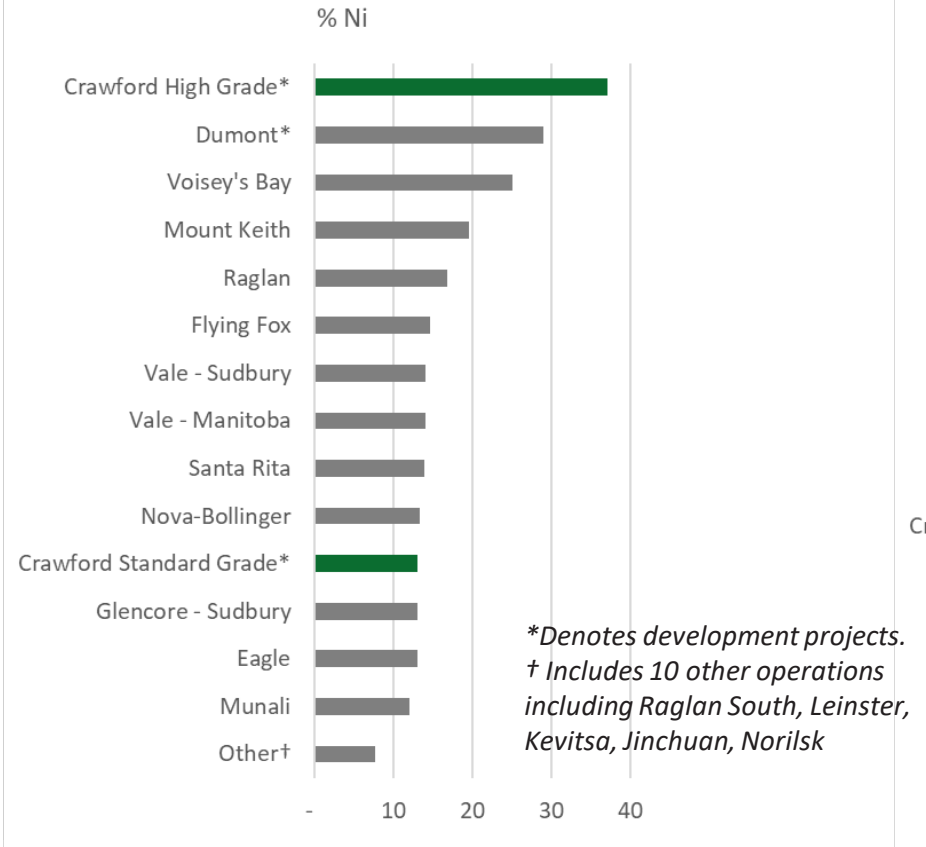

Excellent Initial Metallurgy Results

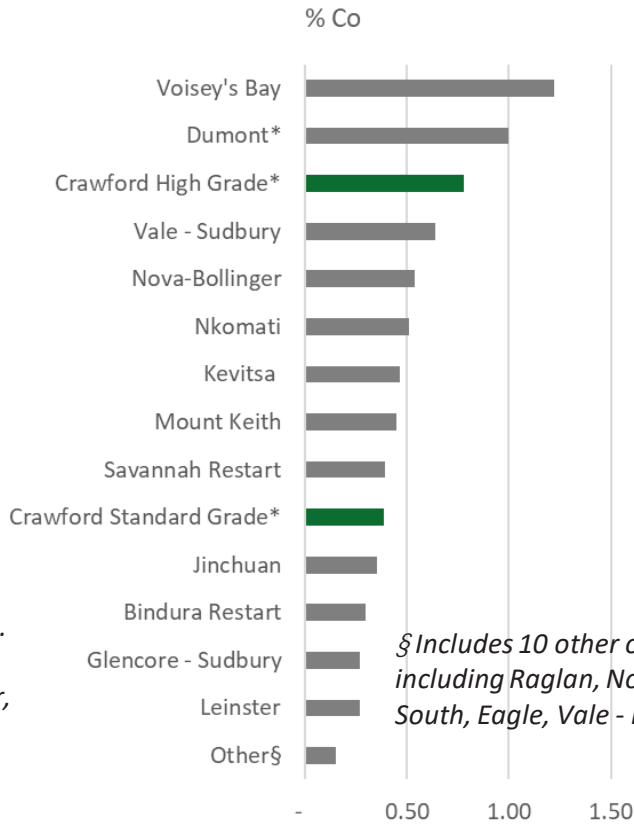

CANADA NICKEL COMPANY

Initial metallurgical testing confirmed excellent nickel recovery of 46%, 51% and 52% from the first 3 locked cycle tests using conventional flowsheet similar to other ultramafic deposits

2020 Concentrate Grade (% Ni and % Co) for Global Nickel Sulphide Operations/Projects Compared to Crawford Nickel-Cobalt Project(1)

**Denotes development projects.*
† Includes 10 other operations including Raglan South, Leinster, Kevitsa, Jinchuan, Norilsk

§ Includes 10 other operations including Raglan, Norilsk, Raglan South, Eagle, Vale - Manitoba

- Recent test results confirm ability to utilize 180 micron grind (versus 150 micron) – 15% less energy/more throughput
- Results also confirm ability to deliver a target 45-50% iron magnetite concentrate with focus on maximizing recovery rather than grade as expected to be processed locally. Substantial iron credit – samples recovered 15X and 30X iron to nickel

(1) Source: Wood Mackenzie

NetZero Metals
NetZero Carbon Production Potential

CANADA NICKEL COMPANY

A number of key technologies are being explored to develop a Zero-Carbon footprint operation

Mining

- Utilization of electric rope shovels and trolley trucks which utilize electricity, rather than diesel fuel, as a power source wherever possible
- Deposition approaches for waste rock and tailings during mining to expose the serpentine rock to air to allow this material to absorb CO_2 through natural mineral carbonation (exact amount and rate at which CO_2 can be absorbed from materials mined at Crawford will be analyzed during upcoming phases of work)

Milling

- Large scale processing of lower grade sulphide ores utilizes a significant amount of electricity - local proximity to hydroelectricity provides the potential to minimize carbon emissions for this stage of production.

NetZero Metals - Nickel-Cobalt Concentrate Processing

- Existing pyrometallurgical processes such as roasting, sulphation roasting, and reduction using electric arc furnaces (utilizing natural gas rather than coke or coal as a reductant) with the offgases captured and re-routed to allow the CO_2 be captured by the waste rock and tailings
- Existing hydrometallurgical processes to produce nickel and cobalt products such as the Albion or other similar processes, which generate minimal off-gases to produce nickel and cobalt products. The off-gases will again be captured and treated to ensure CO_2 and SO_2 emissions are minimized.

NetZero Metals - Magnetite Concentrate Processing

- Production of iron products utilizing existing direct reduced iron (DRI) processes or reduction in electric arc furnaces utilizing natural gas

Ground-breaking MOU Signed with Local First Nations

CANADA NICKEL COMPANY

Canada Nickel has entered into Memorandum of Understandings with Taykwa Tagamou Nation and the Matachewan and Mattagami First Nations.

TAYKWA TAGAMOU NATION

"Our community favours a development project like Canada Nickel's that provides a positive economic impact, minimal environmental impacts with a commitment to deliver NetZero products, and has the foresight to engage with Taykwa Tagamou during the early stages of development." – *Chief Bruce Archibald, Taykwa Tagamou Nation, December 16, 2020*

MATACHEWAN FIRST NATION

"…happy to be forging a strong and mutually beneficial relationship with Canada Nickel on their promising Nickel-Cobalt Project." – *Chief Jason Batisse, Matachewan First Nation, December 14, 2020*

"Mark is genuinely committed to responsible and sustainable development, and our community appreciates being engaged in the early planning stages of the project." – *Chief Chad Boissoneau, Mattagami First Nation, December 14, 2020*

Refer to Canada Nickel TSX-V Announcements dated December 14 and December 16, 2020

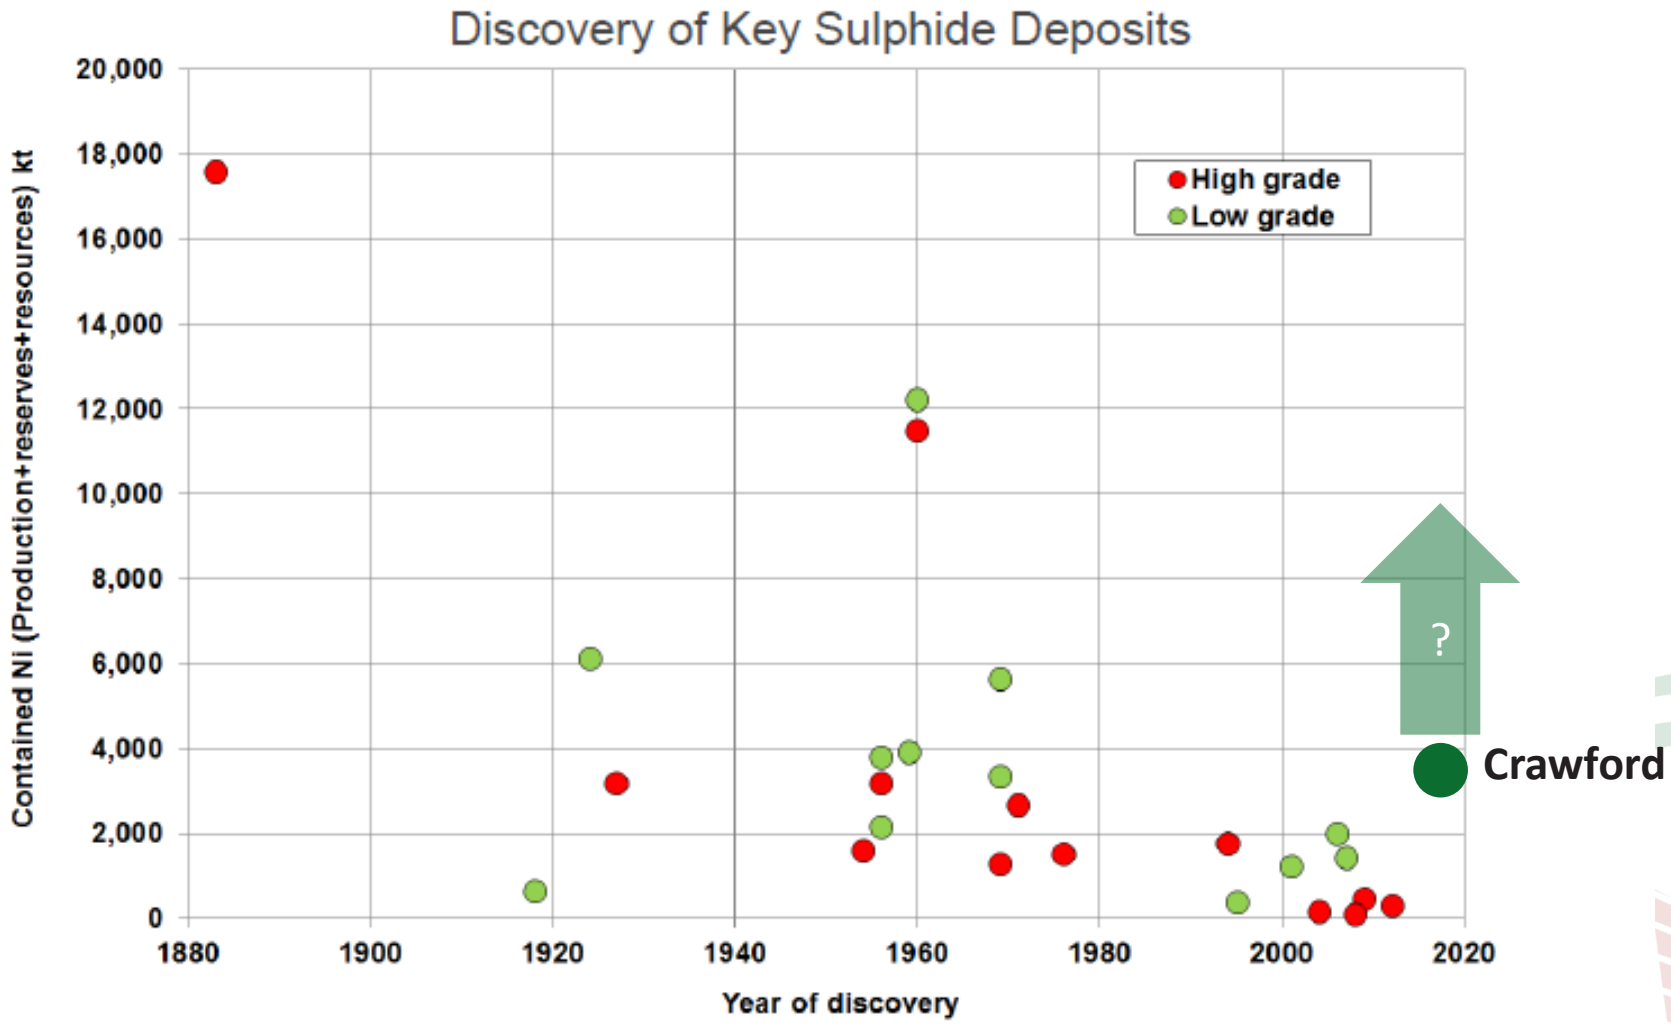

MOU Signed for Potential Use of Glencore Kidd Concentrator & Met Site

The opportunity to utilize the excess capacity and existing infrastructure at the Kidd Met Site provides the potential to allow a faster, simpler, smaller scale start-up of Crawford at a vastly lower capital cost while the Company continues to permit and develop the much larger scale project currently being contemplated

- MOU signed for potential use of Glencore's Kidd concentrator and metallurgical site ("Met Site") in Timmins, Ontario for the treatment and processing of material mined from Crawford approximately 40 km away
- Canada Nickel has completed an initial high-level assessment and will now proceed with a detailed study on the potential for upgrading excess capacity at the Kidd Concentrator and/or utilizing the existing infrastructure in place at the Kidd Met Site for milling and further processing the nickel-cobalt and magnetite concentrates that are expected to be produced from Crawford.
- Should the study deliver a positive outcome for both parties, the parties will continue good faith negotiations towards a binding agreement.
- This detailed study is expected to be completed by the end of March 2021.

Crawford is Largest Nickel Sulphide Discovery Since Early 1970s

CANADA NICKEL COMPANY

Source: Vale presentation at the Metal Bulletin 3rd International Nickel Conference , London, April 29, 2015

Significant Exploration Potential
>50% Crawford + Multiple New Targets

CANADA NICKEL COMPANY

Fully consolidated properties contain multiple nickel-bearing target structures 30km of total strike length and 150 - 600m wide

- For reference, the Crawford Main Zone resource is 1.7 km long and 225-425 metres wide

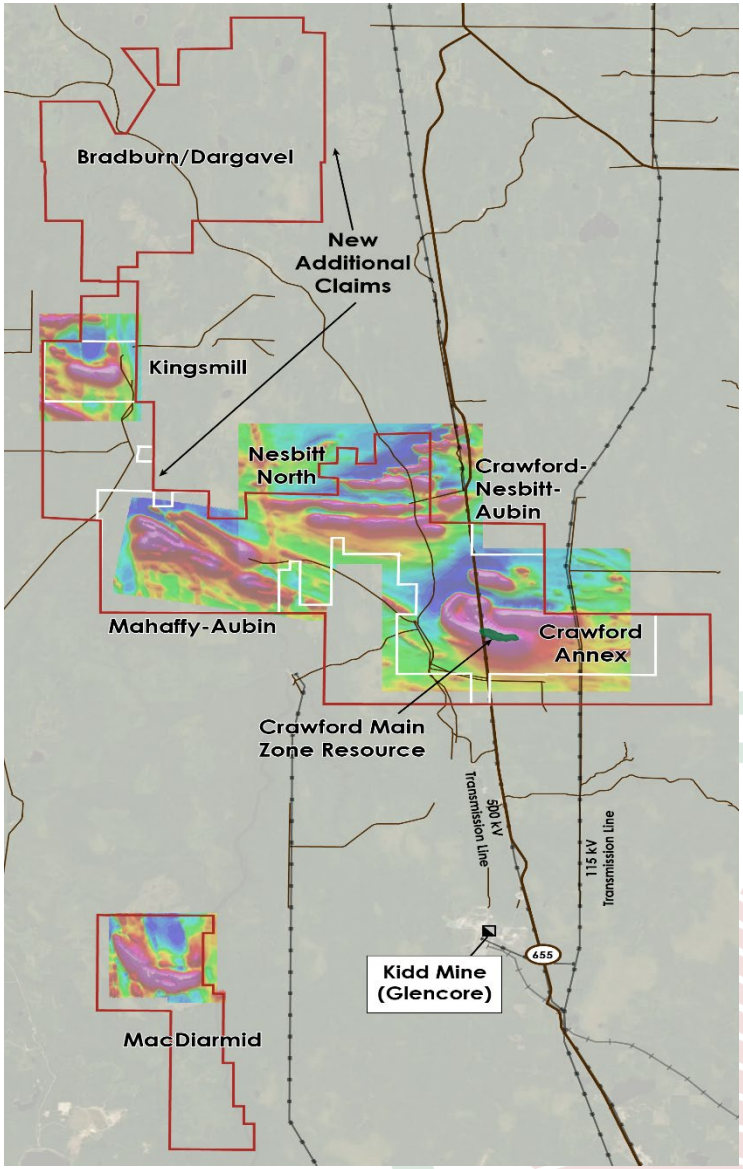

Historic drilling yielded nickel-bearing intersections on all of the target structures

- Kingsmill – 0.30% Ni over 503m from 118m in historic hole KML-12-02 (2012) and 0.31% Ni over 302m from 20m in historic hole 27090 (1966)
- Nesbitt-North – 0.28% Ni over 163m from 233m in historic hole 27083 (1966)
- Mahaffy-Aubin – 0.23% Ni over 127m from 82m in historic hole 31901 (1966) and of 276m of serpentinized ultramafic mineralization (similar host mineralization at Crawford) in historic hole T2-80-2 (1980) with no assays provided
- Dargavel - 0.24% nickel over 173m with local assays up to 0.40% nickel in historic hole 25014

PGM-enriched structures similar to Crawford also identified at Kingsmill

- 1.0 g/t PGM over 2m from 96m within 0.3 g/t PGM over 30m from 69m in historic hole KML-12-11 (2012), 0.8 g/t PGM over 5m from 523m within 0.5 g/t PGM over 24m in historic hole KML-12-07 (2012)

Airborne magnetic and gravity survey totaling 2,731 km completed.

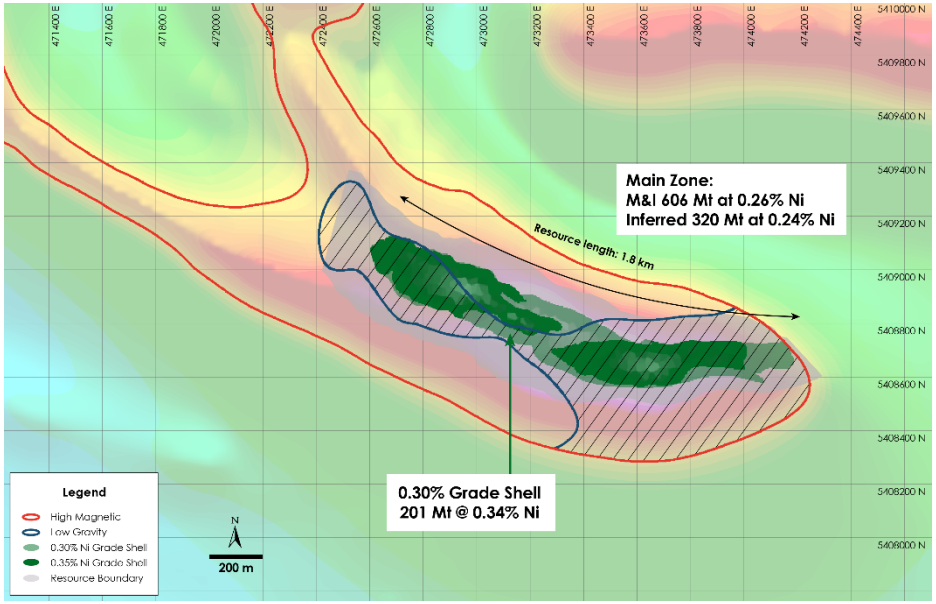

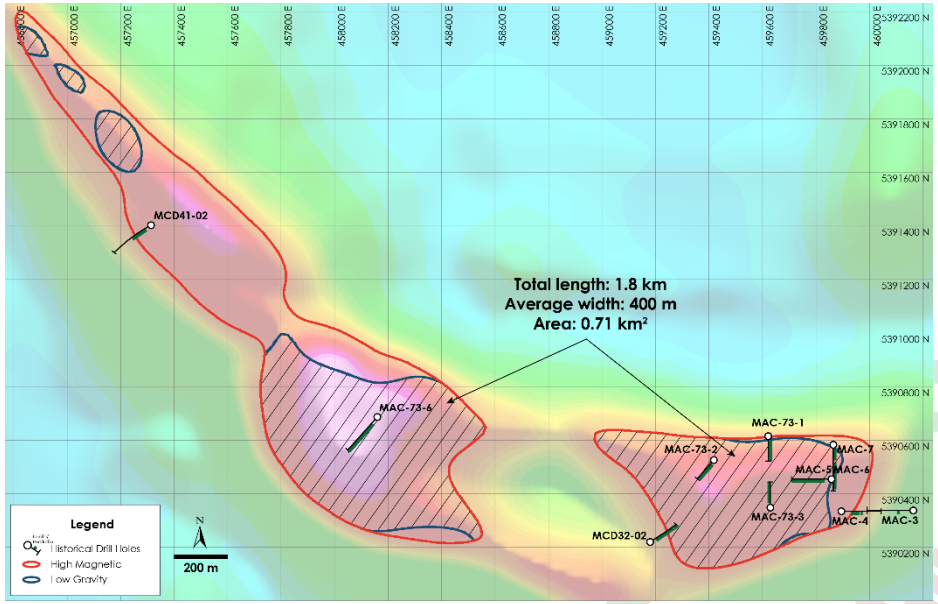

MacDiarmid – 15% Larger Anomaly Than Crawford Main Zone

CANADA NICKEL COMPANY

Initial geophysical results and review of historical exploration work has generated a number of excellent targets including MacDiarmid where high quality coincident anomaly is 15% larger than original Crawford Main Zone target

Plan view of Crawford and MacDiarmid Properties – Outline of Gravity Low and Magnetic High geophysics anomaly overlain on total field magnetic intensity

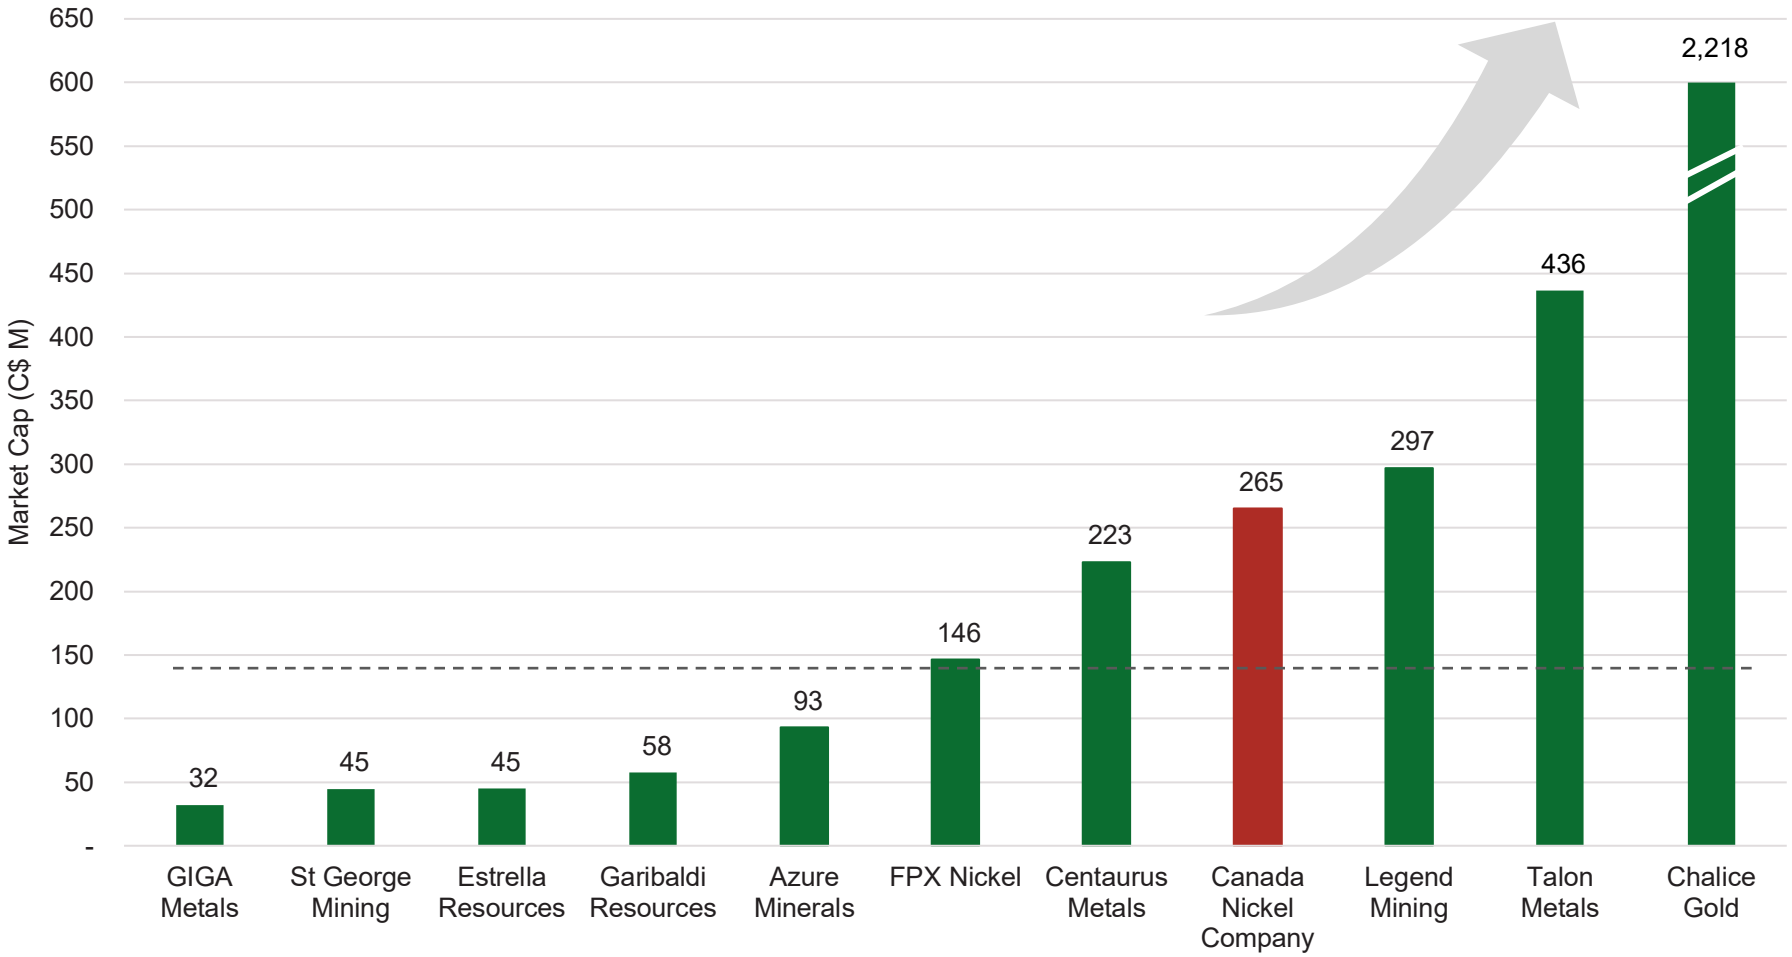

All 7 historical holes at MacDiarmid drilled entirely within the target coincident anomaly intersected dunite or peridotite (the mineralized host rock at Crawford) across the bulk of the core length, and indicated presence of magnetite and sulphides in abundances consistent with that seen in Crawford core logs – critical to the formation of nickel sulphide minerals.
